

Wearable Computer Features and Benefits

SYSTEM FEATURES

Complete wearable computer featuring an augmented vision display, Windows® CE.Net embedded computer and 802.11b wireless connectivity.

Three operating modes: *Thin Client* (remote terminal using Windows Server 2003 and Terminal Services Client), *Thick Client* (direct connection to Internet or Intranet data and/or applications) and *Standalone* (onboard data)

Windows CE.NET operating system

Industry standard 802.11b wireless connection

One touch connectivity

Integrated touchpad and hot keys

USB mouse/keyboard support

Flash ROM for storing settings and upgrading system firmware

System is designed to meet IPX4 for water incursion resistance

BENEFITS

Increased productivity, improved quality, enhanced safety. Complete system—integrated product is easy to set up and easy to use. Nothing else to buy or integrate; no extra cables or external batteries needed. Just turn it on, connect, and start realizing gains in productivity and quality.

Versatile and powerful without the need for a full Windows PC wearable computer. Run any Windows application in *Thin Client* mode with high performance.

Windows CE keeps operation simple and familiar while providing necessary functionality—without the operating system overhead of a laptop computer.

Wireless enabled and easily upgradable as higher speed networks become available.

Go directly to internet or intranet sites or applications at power up (after initial configuration).

Maneuver quickly and easily by touch—to and within programs and documents, while on task.

Simply plug-in any standard USB data entry device.

Save configurations without added cost and support issues of a hard drive. Easy to keep system up to date and functioning at peak efficiency.

Complete system is rugged for industrial environments—moisture, dust, drop and vibration resistant.
